

burglar alarm systems

In accordance with DIN VDE 0833, Part 1 and 3, as well as VdS 2711
Year by year damages because of break-ins into houses, apartments and companies amount to billions of Euros in Germany. With intelligent burglar alarm systems you can protect your assets and guarantee your own safety.

Central alarm unit and alarm handling form the danger alarm system concept. The modular set-up provides you with appropriate safety. Entirely depending on your personal need for safety we arrange the exact system set-up for you that you will actually require. Houses, stores, offices, office complex or storage facility: We offer you safety with options for a later upgrade.

Most burglars enter a building the same way as you: through the door. Furthermore, windows, light wells or skylights are a temptation. However, all possible entry points can be secured.

Every burglary attempt is immediately forwarded to the central unit through e.g. contact or breakage of glass detectors. And should somebody try to access the building without permit infrared and solid borne sound sensors will record it.

The emergency call transmission unit informs a connected security service of an activated alarm, further steps like an alert to the police can follow up immediately.

The alarm systems employed by us are authorized by the VdS (Verband der Schadensversicherer = Association of Damage Insurers of Germany) and are installed following the current VdS guidelines.

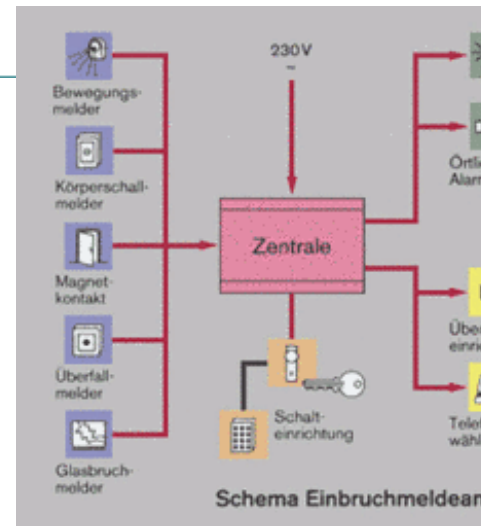

We offer planning, project management and installation of burglar alarm systems in accordance with VdS guidelines. We provide maintenance at regular intervals, repair work and emergency service on a 24 hour stand-by basis.
